

REMOTE INTERNET COMMUNICATIONS FOR PLATINUM SERIES CONTROLS

Boiler Room Management

- Remote Access of multiple buildings and Platinum controls through any internet connection
- No software or user license required
- Mobile App version allows on the go access
- Monitor, Access and Revise Boiler Control Setting Remotely

Building Energy Management

- Building Space Temp Feedback aids in increasing Boiler Efficiency Up to 15%
- Calculates Heating per SqFt of building allows easy comparison of multiple buildings
- Import Monthly Gas Utility to Determine Energy Consumption per Degree Day
- Create Standard or Custom Data History Re-orting

Alarm Alerts

- Receive Email or Text Alarm Alerts
- Assign multiple Users Read or Full Access along with alert notifications

ICMS – Access and Change Settings

The Account Owner has the authority to create any number of users each with different access level. This level of assigned access can vary by control. The Account owner can also assign access and the level of access for users from other accounts. Depending on the level of access assigned users can either monitor the building/control or have the ability change control settings. This ability to assign access as needed gives a maintenance/service company the ad-vantage of managing all of his customers from a single account.

ICMS – Building List and Building View

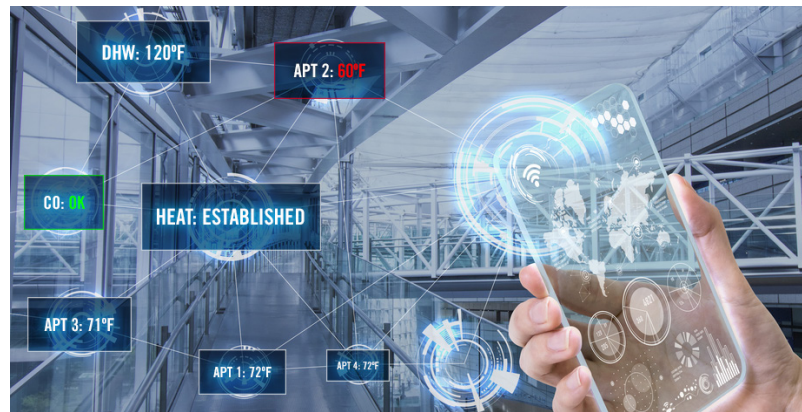

The ICMS Dashboard is the main screen from which the customer can gain access to their account(s) along with the assigned control(s) to those accounts. The customer can also gain access to the settings of each control and the individual sensor information. The customer will have real time information that is important in managing their building and boiler room. This includes any active alarms, the current space temp average in the building and much more.

ICMS – Live Data

ICMS brings building and live data from the Platinum control to the user. In addition, changes to the Platinum settings are immediate and the ability to lockout setting adjustments locally at the Platinum control are a click away if desired. A user will be able to view and change settings on any computer with Internet access. No specialized software is required.

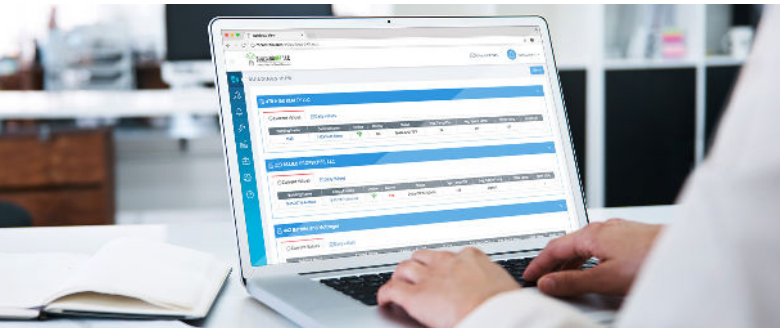

ICMS – Reports and History

ICMS gives the user the ability to have any setting or sensor reported and charted. The data is always available for the user. The user has the ability to customize and modify detail history at any time allowing the history data to be viewed and analyzed in a variety of ways. Customized reports can also be configured to be e-mail to the user at specific time intervals. The user can also export history data in multiple formats to be used in a variety of reports.

ICMS – Monitoring

A specialized user account in ICMS can be created as a Monitor. This type of account is usually for a Service/Maintenance company and allows them to utilize the ICMS account to receive instant alarm notifications. The Monitor account can have constant detailed live alarm notifications and status information for all buildings and panels accessible by that ICMS account.

ICMS – Alarm and Alarm Logs

Each Platinum control and assigned sensor can be configured for a variety of alarm notifications. The alarm notifications can be delivered as an e-mail, as a text message to a mobile phone, to the web account or any combination of deliveries. ICMS also maintains a detailed alarm history log of all alarm events and their deliveries for viewing allowing the user to identify problem patterns.
